

Hearts of Our Heroes

by Wendy Felix

Our clinic nurses have really risen to the challenges presented by COVID-19; and they work tirelessly every day to provide the best care to our individuals. These fabulous four continue to see many individuals (face to face) in the clinics. They are completing the screenings and assessments, drawing labs, giving injections, providing education, and distributing medications. They are assessing other individuals via telephone as well; to check on their physical, emotional, and mental well-being to make sure they are doing ok during this pandemic. They continue to advocate for our individuals without skipping a beat, doing patient assistance applications and prior authorizations for medications. These scrub wearing frontline heroes have had to modify the way they provide care these days. Through having their work space moved to the lobby, only bringing in one client at a time from the outside, wearing a full PPE (gown, gloves, mask for every individual seen), and having to clean and sanitize all day long. I am proud to work with such a fine group of intelligent, caring, compassionate, and hard working nurses!
